upCTF - OSINT CTF Write-up - The Dig

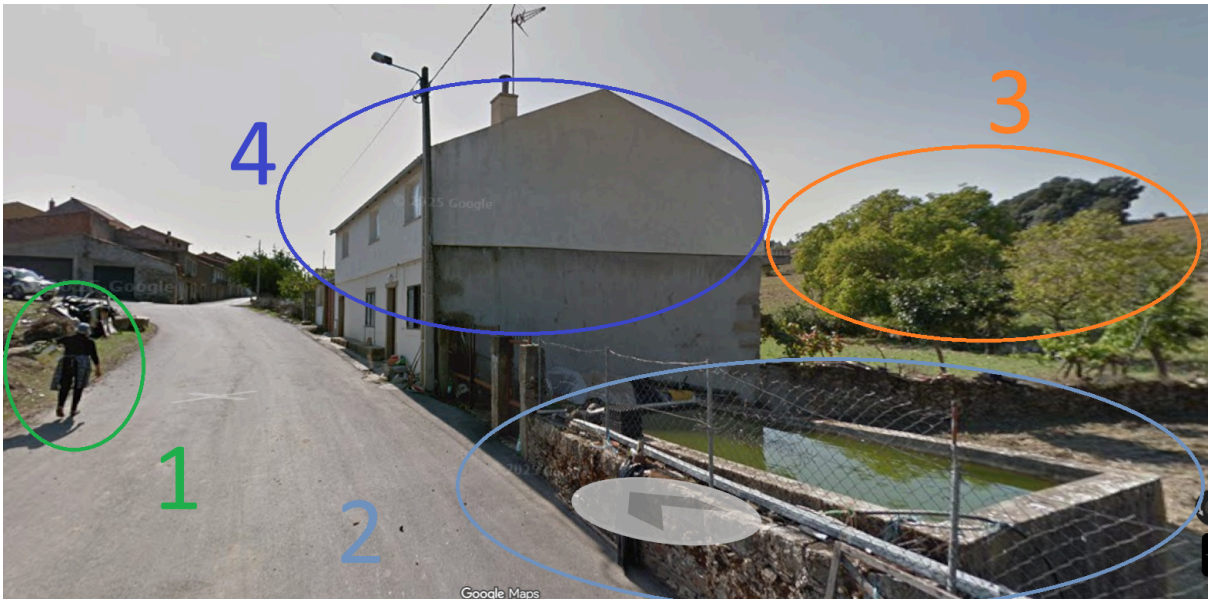
09/03/2026

Author: ODark
Team: qual era o nome mesmo?

INFO

- **CTF:** upCTF
- **Category**: OSINT
- **Descripton**: Here I am, locked inside my white castle, gazing out at silent streets that stretch nowhere. My mind drifts to a place I cannot see - a place that feels like it lies beneath my feet, on the farthest edge of the world. There, sunlight spills endlessly across golden sand, the sea folds itself into warm waves, and little cars dart about in dloops, as if racing just for the joy of it. It is the mirror opposite of these quiet walls, and yet, somehow, it feels closer with every thought.
  Format - upCTF{whereAmI_whereIWannaBe} Example - upCTF{espinho_unitedkingdom}

We start the CTF searching for the image on Yandex, Google Images and TinEye. As we don't find any results, we look at the image better trying to identify elements that we could use to identify the local.



1 - The outfit of woman

2 - The water tank

3 - The type of trees, that are oaks

4 - The architect house architecture

With the identifications of the image, we could know where the country is, being Portugal.

With the information of the country of the image, we try to find the antipode of Portugal because the description "a place that feels like it lies beneath my feet, on the farthest edge of the world", that is New Zealand.

With the information of New Zealand, and New Zealand being know as "the farthest edge of the world", we confirm it.

Now we had to find the original local of the image, and instead looking for villages of Portugal, that are a lot, we did the inverse, we look for cities and locales that follow the description "There, sunlight spills endlessly across golden sand, the sea folds itself into warm waves, and little cars dart about in dloops, as if racing just for the joy of it."

Being these the cities that we thought:

- Tasman
- Tahunanui

With these cities, we did the inverse and looked for the antipode. That's when we found the coordinates of the antipode of Tahuanui 41°17'13.2"N 6°45'14.4"W.

Coordinates on Google Maps

Having the coordinates, we look for the nearby local, that is Morgadourdo, Castelo branco. Using the street view of this village, we found the original image.
